Prices for Natural Fancy Coloured Diamonds

One of the key questions concerning Natural Fancy Coloured Diamonds is pricing. Compared to colourless diamonds, the pricing system for natural coloured diamonds is considerably more complex. There are, however, two distinct factors that determine the price of a natural coloured diamond.

Rarity: the frequency of the colour, size and shape

Beauty: the subjective perception of the observer

Natural Fancy Coloured Diamonds can be generally divided into 3 different price groups:

Price group 1: White; Brown; Gray

Price group 2: Olive Green; Yellow; Orange with secondary colours

Price group 3: Pink; Green; Orange; Blue

The more intense and beautiful the hue and the larger the diamond, the rarer and more sought-after it becomes. The price increases exponentially.

The cut also plays an important role. A brilliant round cut is less common than other cuts for larger natural coloured diamonds. This results in a significant increase in price compared to a similar stone with a different cut.

These estimates are based on the experience of the Kulsen & Hennig GbR and Dominik Kulsen AG Companies.
